INSTRUMENT RING

- Functions

- * Instrument rings are required for flange-mounted and sandwich type remote if the danger exists that the process conditions and the geometry of the connection could make the medium into deposits or blockages.
- * The Instrument ring is clamped between the process flange and the remote seal.
- * Deposits can be flushed away from the diaphragm through the holes in the sizem, or the pressure volume can be vented.
- * Different nominal sizes and forms permit adaptation to the repective process flange.
